

Launches Kenyon Response™ Incident Data Management Software for Emergency and Disaster Management

(Houston, Texas, September 12, 2011) Kenyon International Emergency Services, Inc., the world's largest disaster management company, today announces the release of Kenyon Response™ Incident Data Management Software designed to assist emergency professionals to manage the aftermath of a major catastrophe.

When a disaster happens, emergency response professionals must have access to accurate information quickly to manage the emergency. Critical data collection systems must be in place to help the emergency manager and incident director determine how many lives have been lost, numbers of people injured, information to locate missing persons and other vital statistics.

Kenyon Response™ has the capabilities to manage data flow from all aspects of the incident, including information compiled from the Family Assistance Center (FAC), Search and Recovery teams, Missing Persons and Morgue Operations, through the processes of Identification, Release of Deceased to loved ones, Repatriation, Personal Effects Management, Media Relations, and Claims.

"Kenyon Response™ is not the typical kind of software that emergency managers or incident managers are used to," said Robert A. Jensen, CEO of Kenyon International Emergency Services, Inc. "Most emergency response professionals are familiar with software programs that are focused specific functions during a disaster, for example call center management, resource management or message exchange. Based upon our experience in managing hundreds of disasters across the globe, including commercial air crashes, train accidents, bombings and included natural disasters, we designed Kenyon Response™ to combine call center management, resource management, message exchange and other management tools that allows key emergency management personnel to have access to information to manage the emergency in real time, especially when it comes to the disposition of injured or missing persons and identifying deceased individuals to be returned to their loved ones."

Kenyon International Launches Kenyon Response™ Incident Data Management Software

Add 1
